RE: City of Marthasville  
Water System

Dear Resident(s):

In order to ensure high quality water is being supplied to our residents, the City will begin disinfection of the water system on a voluntary basis. The system disinfection is being implemented on a voluntary basis with coordination and at the request of the Missouri Department of Natural Resources. Disinfection will continue until construction of the new well and storage tank is completed, old tanks are taken off line, and a complete reevaluation is conducted on the entire waterworks system. Planning for these improvements began approximately two years ago. The City is in the preliminary design phase of the new well and tank project.

As the disinfection equipment is put online, the City will work to calibrate the system to maintain acceptable chlorine residual levels throughout the City. Customers with special needs should be aware of potential problems with their equipment and systems (e.g., kidney dialysis machines). In addition, owners of tropical fish aquariums and holding tanks for fish and shellfish (i.e. stores and restaurants) should be aware that this change in our disinfection process may be harmful to aquatic life if not properly addressed, and are advised to seek professional advice. Customers with inline filters may want to contact the equipment manufacture for any precautions. We appreciate your patience and cooperation during this process.

Supplying safe, high quality drinking water to our residents is one of the City's top priorities.

Sincerely,

Mayor David Lange
